

Embedded node

- A special **node object** representing a **quoted triple**
 - (previously known as "embedded triple")
- that can be used as the value of `@id`.

```
{
  "@context": "...",
  "@id": "#alice",
  "believes": {
    "@id": { "@id": "#bob", "@type":
      "Genius" }
  }
}
```

<#alice> :believes << <#bob> a :Genius >>.

Annotation syntax

- Syntactic sugar to avoid repeating a triple that is both asserted and quoted.

```
{
  "@context": "...",
  "@id": "#alice",
  "workingFor": {
    "@id": "#acme",
    "@annotation": {
      "since": "2019",
      "role": "seniorDeveloper"
    }
  }
}
```

```
<#alice> :workingFor <#acme> { |
  :since "2019"^^xsd:date; :role :seniorManager | }.
```
