

JSON-LD 1.1 Syntax

Ten deferred issues:

- #108 Consider context by reference with metadata
- #191 Compact IRI expansion support for non-trivial prefix term definitions
- #280 language-maps don't allow separate base direction
- #328 @default in @context in JSON-LD core syntax
- #329 Suggestion about @prefix
- #335 Type Coercion / Node Conversion: @coerce keyword or similar
- #355 Kill "IRI"? (also ErratumRaised)
- #362 New feature: @template
- #372 Support multiple IRIs for @reverse
- #376 Make it easier to keep semantics of object-oriented models

JSON-LD 1.1 API

Ten ErratumRaised

- #435 relative iri compaction
- #496 Rules for dropping free-floating values in Expansion Algorithm
- #502 Which context should be used to get the term definition in compaction algorithm step 6?
- #503 Default value of produceGeneralizedRdf should be false
- #509 integer JSON value should be expanded to an IRI in presence of a base IRI
- #513 Test compact#t0080 is wrong
- #518 Possible mistake in Context Processing Algorithm
- #533 Invalid '@base' IRI is accepted by the context processing algorithm in deserialization test suite.
- #535 What to do with value entries outside value objects?
- #547 Compaction of IRIs with "@list" @container for sets of @list
