

Goal

- Extend JSON-LD to support RDF-star
- as defined by the Community Group Report
- and eventually by the new Working Group

Embedded node

- A special **node object** representing a **quoted triple**
 - (previously known as "embedded triple")
- that can be used as the value of `@id`.

```
{
  "@context": "...",
  "@id": "#alice",
  "believes": {
    "@id": { "@id": "#bob", "@type":
"Genius" }
  }
}
```

```
<#alice> :believes << <#bob> a :Genius >>.
```
